THE STRUCTURE OF POLYNOMIAL IDEALS AND GROBNER BASES (CLASSIC REPRINT) (PAPERBACK)

Brand New Book ***** Print on Demand *****.Excerpt from The Structure of Polynomial Ideals and Grobner Bases The use of Grobner Bases is becoming increasingly important in algebraic computational geometry. As a result, there has been much activity in the recent years concerning the complexity of Buchberger s algorithm, and the degree of polynomials which it may produce. Bayer s thesis in 1982 provided the direction for recent research, and several recent papers have combined to show that the complexity of computing a Grobner Basis for a given ideal is double exponential in the number of variables. This paper introduces a new partitioning of a polynomial ideal. Using this partitioning, the sharpened degree bound can be obtained using only combinatorial arguments, and without the need to change coordinate systems.
